

User Management Concept

Group

- In Prodiags 5 the **Group** stands for example for school, business or organisation. All data that's stored in the group (study result, roles, memberships etc.) are group specific and independent entities.

Username

- The **Username** is the users personal email. When creating a new user the email is locked as a ID and is not changeable afterwards.
- The **Username** is only used for login phase authentication. The user has only one **Username** but one **Username** can include different roles in different groups.

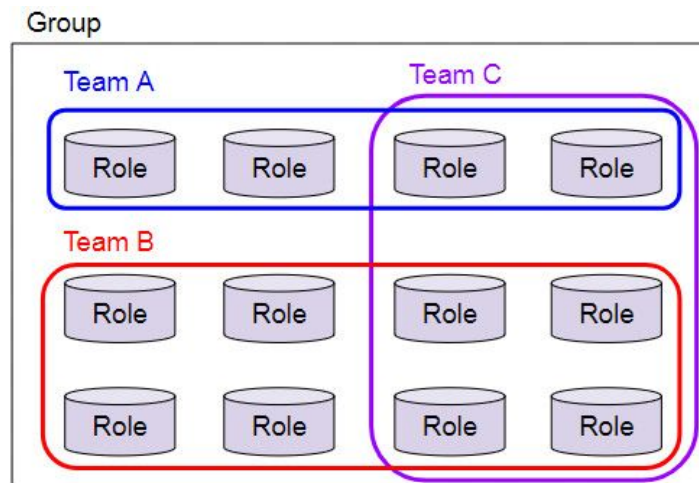

Role

- Normally one user has only one **role** per group. Different types of **roles** can be for example *Student, Teacher or Group Admin*. Access, user rights, personal and study data are related to the **Role** and **Roles** can't be combined.

Team

- The **Team** function can be used for example a *class, office, department, profession, etc.* You can be member of multiple **Teams** inside one **group** using the same **Role**.
- The purpose of the **Team** function is to make your learning management work easier. **Teams** can be found in different selections lists and tools

Team

The **Team** function can be used for example *a class, office, department, profession, etc.*

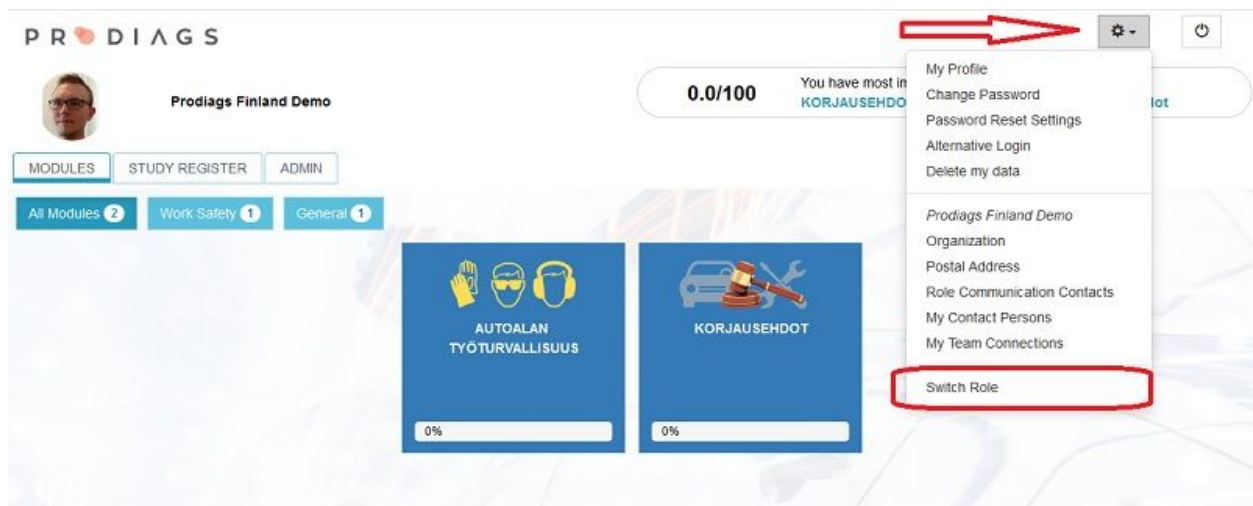

The purpose of the **Team** function is to make your learning management work easier.

Teams can be found in different selection lists and tools.

Teams can be selected as a pre-sorting setting in different admin views and reports.

One user can be member of multiple teams.

Switch Role

Switching between **roles** is easy and it can be done from the homepage.

Just click on the sprocket – button in the upper right hand corner and select **Switch Role**.
